Short Description

FarmScan® M30 is new small in size but big in functionality and features. Modern hand-held designed exclusively for veterinary practitioners, who need an economic and simple ultrasound for the purpose of swine and ovine pregnancy diagnostics . It will help to determine the best time for insemination, early/late pregnancy and sex.

Description

FarmScan® M30 is new small in size but big in functionality and features. Modern hand-held designed exclusively for veterinary practitioners, who need an economic and simple ultrasound for the purpose of swine and ovine pregnancy diagnostics . It will help to determine the best time for insemination, early/late pregnancy and sex.

Applications:

Pregnancy diagnostics for swine and ovine.

Why is it worth having the M30?

You will quickly understand positive qualities of this M30 ultrasound scanner designed to work in the field because:

- 14 hours for continuous operation, meeting a long day scanning needs(2 batteries);
- Only 325g, and modern ergonomics designing make it comfort to use;
- Advanced full digital core technology to obtain high quality images, ensure accurate pregnancy check at early stage;
- 128 frames permanent storage, without loss of image when powered off;

- High quality 3.8”TFT LCD screen providing a clear, transparent image;
- Observation of foetus during pregnancy, helps to reduce the cost of running a breeding farm through selection of pregnant female animals and appropriate breeding management.
